Space 1996

THE STARSHIP ENTERprise, the Death Star and the Battlestar Galactica are a long way from reality, so L5 will have to do. That's the concept behind Sony's new IMAX 3D film, "L5: First City in Space," which sets out to realistically depict a working space city based on research by NASA and leading scientists. The plot—L5 must divert a comet for a much-needed water source—is only a cut

The international space station that precedes L5

above previous fictional IMAX films. But the incredibly detailed computer graphics, based on

well-known artist Pat Rawlings's designs, will make you yearn for the final frontier.
